The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Laue.

In particular, Figure 2 of Laue teaches all of the limitations of Claim 1.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frank ('376) in view of Laue and DE('250).

Frank teaches a fuel pump that is encased in at least a partially metal open-celled foam or polymer foam. The foam is clearly used to dampen vibrations and also will inherently act as a filter means to some degree since the foam acts as sponge for the fuel so the foam keeps fuel around the pump in much the same way a surge tank would. In one embodiment the foam is enclosed by casing that also acts as a partial surge tank structure. Frank also teaches foaming the material into the casing (column 4, lines 42-45) and this would be the equivalent of injection molding the material.

Laue teaches a surge tank around a pump that within a filter enclosure.

DE('250) teaches the idea of using a metal open-celled material as a filter and molding that material.

It would have been obvious to modify Frank by encasing the material within a closed casing for additional surge protection as taught by Laue because this was also discussed by Frank as a way to keep the fuel around the pump and to use a metal foam as the filter medium because the Frank medium also acted as a filter.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
